

BIOPHARMA LYOPHILIZATION TRAINING COURSES

+ Having well trained and informed personnel for your lyophilization processing helps ensure the best results for your projects, productivity and pocket

"The course was well worth while. I learned a lot about areas I previously knew very little about mainly in the cycle development area"

"Everything was great, especially the hospitality"

"I felt that the people working at Biopharma were very competent and helpful"

OUR TRAINING COURSE OPTIONS INCLUDE:

+ On-site Courses

Customized training presents the perfect opportunity for a company that is looking for instruction in the field of lyophilization to create a program specific to their individual operation. Our lecturers will travel to your site and deliver presentations to your team in their own working environment, allowing the chance to discuss with complete confidentiality details of products you are working with as well as particular issues that may arise. This particular option is most suitable for a company that has a good number of people in one particular location that need to be on the same page at the same time.

+ The Customized Webinar

The ideal solution for organizations that have locations around the world that need to be at the same level of education. The webinar is a live, interactive, tailored training program that reaches many locations simultaneously. As there is no need to travel, the cost becomes much more favorable yet you are still receiving the value of expert instruction directed to your own operation. This customized webinar course means that the program is tailored for the customer, covering topics from the fundamentals to addressing very specific and complex issues. It is a completely confidential and therefore a conduit to discuss with total security.

+ Scheduled Courses

Biopharma offers courses throughout the year in the USA, Europe and the UK. This is the most accessible choice as it is open to anyone to attend. The program is designed to provide delegates with in-depth, up-to-date and practical information appropriate for any kind of lyophilization as it intended to be a general education which can be applied to specific situations.

Before deciding which training course is right for you, here's 8 things to consider:

1. Lyophilization/ freeze drying is an extremely complex science with very few experienced, expert personnel able to teach it
2. There is no such thing as a 'one cycle fits all' when it comes to lyophilization
3. Mobility of your personnel
4. The pharma/ biotech industry is tightly regulated so best practice can save time and money
5. There have been advances in technology to improve old formulations which many people are unaware of
6. Well trained maintenance and engineering departments can help eliminate possible downtime of equipment
7. Well trained personnel can identify and address specific issues companies might be experiencing in the manufacturing process
8. Global companies may need to educate specific groups simultaneously

*If you believe that any of these training options
would be beneficial to you or your organization,
